## The Dark Side of the M3!

Bei der Granular Atmospheres handelt es sich um fast ausschließlich völlig neuartige aber spielbare Klänge, die man bis dato auf keinem anderen Synthesizer oder Plugin gehört und in dieser Qualität realisieren konnte!

Die Grundsamples stammen von den hier aufgeführten Synthesizern:

Mini Moog, Oscar, Wasp, Prophet-V, Prophet-VS, OB-MX, VL-1, PPG-Wave, Waveterm, DX-5, D-50, Emu E-4, Morpheus, TR-909 und nicht zu vergessen der Roland CR-78.

Die meisten Samples wurden durch ein spezielles Resyntheseverfahren in dem Highend Computer von Silicon Graphics "Indigo Dream Machine" transferiert und dort mittels eines Real-Time Granular Synthese Programms bearbeitet. Danach wurden die Samples direkt in den Korg OASYS geschickt, nachbearbeitet und auf den M3 übertragen. Das hier mittels Granular Synthese und Silicon Morphig entstandene Material eignet sich besonders für Film und experimentelle Musik.

Natürlich gibt es aber auch ein paar normalere Sounds, die für jeden Musik-Stil einsetzbar sind, allerdings sind diese eher rar! Wir haben uns auf ausgefallene Klänge konzentriert, und so gibt es z.B.: viele morphende Pads von Analog bis Digital, Granular Sweeps, Pads & Lead, Industrial Sounds, Granulare Noises inklusive Percussion.

Es ist sehr schwer, die Sounds zu beschreiben, man muß sie hören oder noch besser selbst spielen!

## The Dark Side of the M3!

The Granular Atmospheres sample library includes completely new however playable sounds never heard before in a similar quality on any other synthesizer or Plugin.

Samples of the following instruments were used:

Mini Moog, Oscar, Wasp, Prophet-V, Prophet-VS, OB-MX, VL-1, PPG-Wave, Waveterm, DX-5, D-50, Emu E-4, Morpheus, TR-909 and the Roland CR-78.

The sample material was re-synthesized in a Silicon Graphics Indigo Dream Machine and converted into waveforms.

These newly generated samples were then imported and edited in OASYS and then transferred to M3.

Granular Atmospheres are perfect for movies and experimental music.

Of course we also included some sounds which can be used in all music styles, but there are only a few as this collection is mostly concentrated on new sound material like morphing pads (analogue and digital), granular sweeps, pads & leads, industrial sounds, granular noises and percussion.

Describing them is quite difficult, you have to hear or even better play them.
