Drawbar Organs für Korg OASYS ©

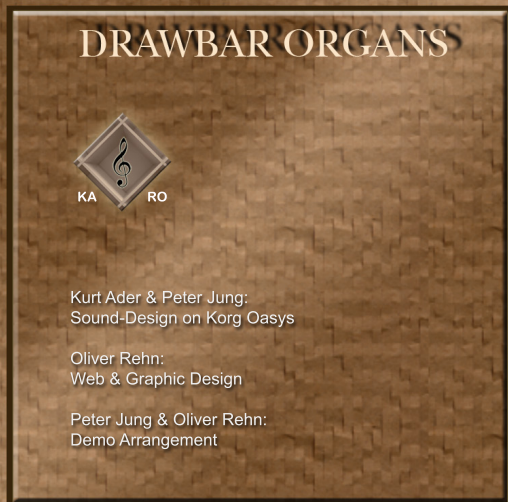

Endlich! KARO introduces the long awaited KDO Drawbars Organ library for the KORG OASYS!

Was vor gut acht Monaten begann, ist nun endlich fertig und spielbereit:

Kurt Ader und Peter Jung haben sich in sorgfältiger Arbeit dem Modellieren und Programmieren von Orgelklängen für den KORG OASYS gewidmet. Besonderes Augenmerk legten unsere beiden Klangmagier auf die Nachbildung von Entertainer- Orgelsounds, wie wir sie von Orgelmodellen vieler großartiger Hersteller wie WERSI, BOEHM, LOWREY und ELKA kennen. Selbstverständlich gibt es auch rockigere Klänge, die wir an den HAMMOND- und VOX-Orgeln lieben.

Die KDO Bibliothek ist eine Zusammenstellung dreier Programmbanken, jede mit 128 Programmen. Die erste Programmbank verwendet ausschließlich die EXi Modeling Organ CX-3. Einmanualige und zweimanualige Orgeln werden hier emuliert, mal mit, mal ohne „Rotary Speakers“. Die zweite Programmbank baut auf den weiteren im OASYS verfügbaren Synthesemodellen wie MOD-7, AL-1 und LAC-1 auf. Die dritte und letzte Programmbank setzt ausschließlich HD-1 ein. Es ist sicher nicht übertrieben zu behaupten, dass die KDO Bibliothek mit ihren 384 Programmen die umfangreichste Orgelklangbibliothek ist, die jemals für einen Synthesizer entwickelt wurde. Peter Jung und Oliver Rehn haben eine kleine Auswahl von Sequenzen eingespielt, die den Entertainercharakter der KDO-Orgelklänge unterstreichen. Aber auch ein bisschen Rock durfte nicht fehlen.

Wir wünschen es uns, dass wir dem vielfach geäußerten Wunsch nach einer Orgelklangbibliothek gerecht geworden sind. Jetzt sind Sie wieder einmal gefragt: Viel Spaß beim Anhören!

Drawbar Organs for Korg OASYS ©

Finally! KARO introduces the long awaited KDO Drawbars Organ library for the KORG OASYS! More than eight months, Kurt Ader and Peter Jung have been spending time in carefully modeling and programming organ sounds for the KORG OASYS. A special focus was laid on entertainer organs like the models by WERSI, BOEHM, LOWREY, ELKA and many other well-known fine organ builders. Of course, rocking sounds known from the beloved HAMMOND and VOX models have not been neglected.

The KDO library is a compilation of three program banks, each holding 128 programs. The first program bank is devoted to the EXi Modeling Organ CX-3. Single manual organ sounds coexist with many dual manual organ emulations with and without rotary speaker effects. The second bank of 128 programs has been affectionately designed using the synthesis models provided by the OASYS, be it MOD-7, AL-1 or LAC-1. The third and final bank has been especially made using the HD-1 synthesis engine. It is certainly not an exaggeration to state that the KDO library with its 384 programs is the most complete organ library ever made for a synthesizer.

Again, it was Peter Jung and Oliver Rehn who played a couple of sequences demonstrating entertainer organ sounds and – snr – a bit of rock as well. We sincerely hope that we made the wish of many organ players using the OASYS come true: Now, it's your turn: hear!
